An investigation into the materialist madness of Darwinian views of evolution, further investigation of modern quantum and evolutionary developmental discoveries, shows the Darwinian evolutionary worldview is incorrect, and a non-theistic intelligent design operating from the quantum level is correct. This leads to the exploration of the view that the universe is a self-perceiving organism employing sentient beings as its perceiving agents.

Proceedings from the Ninth International Conference on Artificial Life, papers by scientists of many disciplines focusing on the principles of organization and applications of complex life-like systems. Artificial life is an interdisciplinary effort to investigate the fundamental properties of living systems through the simulation and synthesis of life-like processes. The young field brings a powerful set of tools to the study of how high-level behavior can arise in systems governed by simple rules of interaction. Some of the fundamental questions include: What are the principles of evolution, learning, and growth that can be understood well enough to simulate? As an information process, can robots be built faster and more cheaply by mimicking biology than by the product design process used for automobiles and airplanes? How can we unify theories

from dynamical systems game theory evolution computing geophysics and cognition the field has contributed fundamentally to our understanding of life itself through computer models and has led to novel solutions to complex real world problems across high technology and human society this elite biennial meeting has grown from a small workshop in santa fe to a major international conference this ninth volume of the proceedings of the international a life conference reflects the growing quality and impact of this interdisciplinary scientific community
